

PEDAGOGICAL PRINCIPLES OF EFFECTIVE ORGANIZATION OF EDUCATIONAL PROCESSES IN THE HIGHER EDUCATION SYSTEM

ABDULLAEVA DILNOZA NARZULLAEVNA
Doctor of Philosophy (PhD) in Pedagogical Sciences,
associate professor.
Teacher of the International Nordic University

SHEKIBO SAMADI
Graduate student of the International Nordic University

We know that the power of any country is determined by the intellectual potential of its youth. This directly depends on the quality of education. Special attention is paid to the effectiveness of the educational process in the scientific researches on improving innovation, integration and quality monitoring of education in the educational system. In research in this direction, the improvement of the theoretical and methodological foundations of the monitoring of the quality of teaching, the implementation of state education standards based on the competence approach, the introduction of innovative ideas, information and communication technologies into the continuous education system, scientifically based proposals and recommendations special attention is paid to the development of the system, the identification of factors affecting the quality of education and training, and the automation of the monitoring of the quality of training.

Comprehensive reforms implemented in the world education system have been the highest goal of human society - aimed at finding a solution to the problem of educating a physically and morally mature, mentally mature, spiritually rich person, which is of great importance in a democratic state and a strong civil society. and sets the task of increasing the effectiveness of the competitive personnel training system based on modern requirements. Therefore, it is possible to achieve high results by

establishing effective management in educational institutions and organizing educational work based on the requirements of the times.

The attention and actions aimed at organizing education in higher education institutions certainly prepare the ground for students to develop high intellectual potential. However, another important issue is their manners, behavior, in a word, the expansion of their worldview.

Until 2030: the new concept of education adopted by developed countries and international organizations in world practice recognizes that "Education is the main driving force of development and an important activity that achieves the goals of sustainable development".

Decree of the President of the Republic of Uzbekistan dated July 11, 2019 "On measures to reform management in the field of higher and secondary special education" No. PF-5763, dated October 8, 2019 No. PF-5847 "On approving the concept of development of the transport system until 2030", PF-No. 28 January 2022 "On the Development Strategy of New Uzbekistan for 2022-2026 Decree No. 60 of June 5, 2018 "On additional measures to improve the quality of education in higher education institutions and ensure their active participation in the comprehensive reforms that are increasing in the country" Decision No. 3775 and other similar legal and regulatory documents set out appropriate measures on the issues of effective organization and management of higher education institutions in our republic.

Education is a practical pedagogical process aimed at forming certain physical, mental, moral and spiritual qualities in a person; is a set of measures taken to ensure that a person has the characteristics necessary for living in society. Education is an eternal value that ensures human humanity. Human society cannot exist without education. Because the values that ensure the existence of a person and society are passed from one generation to another only thanks to education. We must not forget

that the foundation stone of education is laid in the family, that education begins with the family.

Education is aimed at establishing and strengthening relationships with people, psychologically helping them to adapt to various processes, increasing love for the Motherland, supporting aspirations and talents, talent and It means stimulating the initiative, taking one's place in life, educating the young generation in the spirit of patriotism, and ensuring intellectual development. From this point of view, the educational process in the development of new Uzbekistan is the formation of an independent thinking person in the society, the realization of his own value, strong will, faith, raising a person who has a clear goal in life, realizing his goals with his own mind, thinking, and work. is the main concept.

The educational process is the process of socialization of a person, it means to prepare him for life, to find his place in society, to take an active attitude, to educate him in such a way as to benefit the society and to bring moral and material satisfaction from his work. Thus, the essence of the educational process is that external objective wealth becomes internal wealth, passes into the sphere of human consciousness, and then it becomes the result of behavior and activity. Factors influencing the educational process, activity, need, intellectual emotional wealth , activities, habits, behavior and attitude are established in relation to each other.

The higher the effectiveness of the educational process, the more the person enriches the motivational sphere of needs and rebuilds it. Develops his intellectual emotional volitional activity.

The effectiveness of the educational process in higher education institutions is high only if a person can mobilize his motivational and practical activities and ensure the unity of consciousness and activity. Education as a process of purposeful

formation and development of a person is complicated by a wide range of circumstances.

The following are the rules of the educational process organized in educational institutions:

1. The more thoughtful and carefully organized the activities of learners are, the more effective their behavior, relationships, and in general, the educational process will be.

2. The more correctly and effectively the educational process affects the internal aspects of a person (psyche, emotions), the higher its result will be.

3. The more the educational process integrates the influence of the individual on the verbal, sensorial and movement processes in its complex system, the more perfect the individual education will be.

In conclusion, it can be said that the strategic direction of effective organization of educational processes in modern society is the intellectual and moral development of learners based on purposeful independent activity in various fields. Reforms in the field of education in our country are the foundation laid for improving the future of our country. Therefore, it is important to increase the spiritual and moral content of education, to inculcate in students and young people the spirit of loyalty to the ideas of independence, to the national traditions of high spirituality and humanity, to strengthen their immunity to foreign ideas and ideologies, and to strengthen their critical thinking. there is a need to carry out large-scale educational and educational work.
