

**ISSUES OF EDUCATION AND TRAINING IN THE RECONCILIATION OF
EASTERN SCHOLARS****Iminov Odiljon**

Andijan State Pedagogical Institute

2nd stage master student

ABSTRACT: In the article, based on the New Uzbekistan Development Strategy and the concept of the Third Renaissance, the issue of raising a perfect generation that matches our ancestors by integrally connecting education and training in bringing a perfect person to adulthood in our country is highlighted.

KEY WORDS: global changes, Third Renaissance, science and education, education, culture, social factor, Eastern Renaissance, development strategy, institute, pedagogical staff.

Currently, the widespread spread of mass culture in the world community is having a negative impact on the form of government based on national values and traditions. The fact that such global influences have a more negative impact on the education of young people and their maturity than their positive impact, requires the teaching of science and education in general schools to be carried out organically. In particular, in our country, many reforms are being implemented under the leadership of our President so that science, education, culture and spirituality will progress and our growing youth will grow up to be fully mature and perfect people.

In his solemn congratulations to our people on the occasion of the 31st anniversary of our independence, our honorable President focused on education and training in raising healthy and well-rounded young people who are the owners of tomorrow's development, and defined 5 priority tasks within the framework of the Development Strategy until 2026. The first of these priority tasks is aimed at the development of the education sector, and the President put forward the following ideas: "...in the field of education, we will consistently continue to create the most favorable conditions for our children to master modern knowledge and skills. For this purpose, school curriculums, teaching methods, and the content of textbooks will be fundamentally revised. This system will first be examined by advanced foreign experts, and only then will it be put into practice. As a result, a graduate of the New Uzbekistan school will become a person who has acquired modern skills, mastered information technology, creative thinking, can make independent decisions, and a broad worldview. For this purpose, we pay special attention to the issues of building schools in all our regions, especially in rural areas, and providing them with qualified pedagogical staff"[1].

In fact, today, under the leadership of the head of state, special attention is paid to educating potential young people who can compete with the youth of the developed countries of the world in all aspects, who have their own independent vision and opinion.

After all, it is not enough to teach science and education in the formation of young people who have thoroughly mastered modern information technologies, who think creatively, who can set an independent plan for themselves and make new innovations based on this plan. Because if we teach the youth in harmony with education, we can raise the perfect generation that we dream of, that is, a perfect person. Therefore, Abdulla Avlani, who wrote in his book "Turkish Gulistan or Morality" that the role of education in the education of young people is a necessity, put forward the following thoughts: "...education is for us either life - or death, or salvation - or destruction, or happiness or disaster." is the issue" [2]. In addition to imparting knowledge to young people, poet paid special attention to their upbringing and emphasized that it is the main necessity to carry out education and upbringing in an integrated manner. Our great compatriot Imam Ghazali, who touched on the role of the family in child education, puts forward the following thoughts: "Children are a trust given to their parents. A child's heart is a precious gem without any pattern.

October 15th 2022

It accepts whatever pattern is made, and bends wherever it is bent. If he is taught to be good, he will grow and achieve happiness in this world and the hereafter. His parents and every teacher will share his reward. If they are made to do evil, if they are left to their own devices like animals, they will eventually perish. And his guilt falls on the shoulders of those who are responsible for his education" [3].

The great allama Imam Ghazali, who touched on the importance of parents in the education of a child, likened the heart of a child to a gem, and emphasized that this gem plays a key role in its development if it is given a pattern by adults, i.e. education. Ghazali emphasizes that if he is given the right education and upbringing, he will get rewards in the end of the world with his deeds, neglecting the education and upbringing of the child, if he is given a bad upbringing, it will be the basis for the formation of animalistic traits, and his sin is the father who is responsible for the education and upbringing of the child. - he emphasizes that his mother will take responsibility.

On January 28, 2022, the decree of the President of Uzbekistan "On the New Development Strategy of Uzbekistan for 2022-2026" was signed. The new Development Strategy of Uzbekistan consists of 7 directions and 100 goals, and 55 trillion will be allocated to the activities to be implemented within the framework of the State Program for the implementation of the strategy in 2022. Sums and the fact that 11.7 billion dollars are planned to be allocated indicates the importance of the scope of work in this regard [4].

The fourth direction of the development strategy: fair social policy, development of human capital, and 33 goals have been defined in this direction. The fact that 13 of the 33 goals are aimed at the education system shows how much attention is being paid to educating a well-rounded person in our country. In particular, for these purposes, starting from pre-school education, the goal of the work to be carried out in the school education system in 2022-2026 to further increase the quality of education and upbringing has been determined. Therefore, goal 41: through the introduction of the national program for the development of schools is aimed at creating an additional 1.2 million student places in the public education system, and goal 42 is to completely revise and implement the curriculum and textbooks based on advanced foreign experience by 2026. implies. In the development of education and upbringing in school, in order to raise a mature person, it is necessary to improve the material conditions of teachers. The 43rd goal of the development strategy envisages the gradual increase of monthly salaries of qualified teachers to the equivalent of 1,000 US dollars. On the other hand, raising the monthly salary of teachers to 1000 US dollars requires them to produce a well-rounded person. Improving the efficiency of work in this regard is reflected in the 44th goal. In particular, special importance is attached to improving the quality of education in schools, bringing the knowledge and skills of pedagogues to the international level. In this regard, it is necessary to improve the activity of the Institute of retraining and advanced training of public education workers in order to bring the level of knowledge of pedagogues to the level of international requirements. In turn, it is possible to increase the potential of personnel by gradually reforming the institutions of retraining of pedagogues.

In addition to improving the qualifications of pedagogues, it is also important for students to be physically healthy. In particular, the increasing environmental climate changes have a negative impact on the health of the population living in the Aral Bay. In addition to maintaining the ecological balance in the archipelago regions, provision of free hot meals to elementary school students in the region is also provided for in the 45th goal of gradually providing elementary school students with free meals in the Republic of Karakalpakstan and Khorezm region, further development of school education in 2022-2026 is the main focus indicates that. Education, along with education, is important in raising a perfect person in our country, and paying special attention to education instead of education is becoming the main activity today.

To sum up, today the role of education and training is of great importance in bringing to maturity the young people who can compete with the young people of the developed countries of the world. Therefore, today, modern computer technologies have entered into all aspects of our social life and are becoming of primary importance in the development of the education sector.

<https://conferencea.org>October 15th 2022

Therefore, if along with education in human development, the science of education is taught in high schools using modern information technologies, it becomes important to protect the youth from the influence of mass culture on immorality.
