**Annotation:** 21st century - century of Information Technology Development. Today's development is difficult to imagine without the world Information Network-the internet. It is known that the internet is an international system that combines computer networks that ensure the exchange of information and documents. The Internet opened the door to wide opportunities. Walking through the world libraries through the global network without leaving home to the street, world is able to become a distance student of a higher education institution located on the other side of the floor, even perform electronic services through a contract, earn money. This article provides feedback and insights on the internet and its importance in youth education.

**Key words:** internet, Information Technology, Education, Youth, benefits, consumer culture, internet addiction, virtual Culture, Information attacks

**Introduction.** Conduct online conferences, improve online skills, make a quick, cheap video or audio dialogue with loved ones and acquaintances. It is in these aspects that the internet has been overtaking television, radio and other media in attractiveness in later times. But the internet manifests its negative consequences along with many useful aspects. The sluggish culture of information consumption in the population, especially in young people, the lack of knowledge, skills and skills in distinguishing the need from the flow of various messages, is causing some to fall under the influence of a mercenary and currents, to suffer from internet addiction disease. In the people's Republic of China, internet addiction is recognized as a disease and the establishment of special hospitals that treat it is proof of our word.

**Methods.** The biggest problem that has arisen as a result of the Global network is, of course, dependence, disease. The fact that young people spend most of their time in internet has become a global problem. In general, the most severe aspect of internet addiction is forgetting the real world, the duty and duties of humanity. It is necessary that a person live in real life, work honestly, receive knowledge, diligently fulfill his duties, selflessly serve the land of elu, benefit those around him.

In the psyche of a person who spends a lot of time on the internet, there is a state of abstraction and envelopment in his own shell. This creates a ground for him to be shunned, zombi fied by the "third forces" in the future. It is no coincidence that today destructive groups are mainly using the internet in influencing the minds of young people. Another negative aspect of the internet is that selfishness in people, when expressed in modern language, is the reason for the exacerbation of the illusion of egocentrism.

Today's World Youth is the largest generation in the history of all mankind in terms of numbers, since they Number 2 billion people. Today, such concepts as internet culture, virtual Culture, Information Culture, the culture of the correct use of information have taken their place from our lives. It is a requirement of the period in young people to correctly determine their place in the world of the internet and to properly deal with users, to form a qualification for the correct analysis of information in the virtual world.

**Results.** Young people are growing in an era when social media is expanding. This is a delightful case of course. However, it is necessary that everything be the norm. Young people are obliged to find out that the virtual world is not a real world. Sometimes children remain able to visit the network without supervision by adults and without their permission. When children and adolescents are surfing the internet, they may encounter sites that are not accessible at all.

Naturally, such information attracts curious young people more. It is known to everyone that the more children are not allowed to perform an action, the higher the level of interest in them is aroused. It is unlikely that young people will become more interested and pay special attention to this information if they come across certain sources of information from an unhealthy lifestyle on the network. For this reason, it is necessary for adults to explain that information on the network is dangerous, as they instill in their minds that it is impossible to touch sharp-tipped objects such as hot kettles, pots, knives, scissors from the date of birth of the child, to form the potential for the correct use of information in them.

**Discussion.** It is necessary not to forget that the sources of the internet network, as modern adolescents expand their circle of knowledge, their worldview, can, in some respects, have not only a negative, but also a dangerous impact on their upbringing. More recently, parents have tried to avoid the risk of young people becoming addicted to computer games, while at present, the risk of social media is added to this risk. The Internet is a space to satisfy almost all interests. Sometimes it is not even necessary to sit on the network in search of some information, which can be easily achieved due to the fact that they can be presented everywhere on their own.

**Conclusion.** One of the important requirements for the organization of modern education is to achieve high results in a short time, without excessive mental and physical exertion. Between short periods of time, the delivery of certain theoretical knowledge to students, the formation of skills and competencies in them from a certain activity, the assessment of the level of knowledge, skills and qualifications acquired by them requires a high pedagogical skill from the teacher as well as a technological approach to the educational process. Therefore, the role and role of modern teaching methods-interactive methods, innovative technologies in the effective organization of the educational system is great. Knowledge, experience and interactive techniques related to pedagogical technology and pedagogical skills

ensure that students are educated. To do this, we need to organize our classes with a new style using advanced pedagogical technologies. In the updated education, modern lessons are necessary in order to develop the student in every possible way and lead him from knowledge to knowledge.
