

WAYS TO DEVELOP STUDENTS' INTEREST IN EXTRACURRICULAR AND EXTRACURRICULAR ACTIVITIES.

Tulkinova Kholida Tulkunovna

Senior lecturer of the department
“Technology Education Methods”

Egamnazarova Diyora

Student, Technology education

Annotation: In this article, it is important to educate a person through the sphere of interaction in the creation of all vital needs and protect it from an environment that negatively affects its formation as a person, while ensuring the unity of education. The main goal of education is the development and implementation of effective organizational and pedagogical forms and means of spiritual and moral education of the younger generation, based on the rich national, spiritual and historical traditions and customs and universal values of the people.

Keywords: culture, future, purposefulness, national ideology, youth, thought, idea, essence, interest, upbringing, freethinking.

In our time, it is very important to look for effective forms and methods of preparing the future generation for life on the basis of the latest achievements of science and culture.

As stated in the Decree of the President of the Republic of Uzbekistan “On the further improvement and increase in the efficiency of the work of the Public Center “Spirituality and Enlightenment”, the development of high spiritual qualities in society, the formation of a national ideology, rich cultural education in the spirit of our heritage, respect for our historical traditions, universal values, love for the motherland, devotion to the ideas of independence is a decisive factor in all the reforms carried out in our country.

The development of the effectiveness of extracurricular and extracurricular educational work depends, first of all, on the search and implementation of the most modern and convenient ways to form a perfect personality. In order to bring educational work in line with the requirements of the time, it is necessary to reconsider all the ideas underlying education, focus on the personality of the child, and effectively use the positive experience accumulated over the years.

Educational work is carried out in cooperation with law enforcement agencies, creative associations, state and non-state funds, enterprises and organizations. The perfection of the human personality is formed in the course of a very complex and continuous process. Her upbringing is directly influenced by her parents, school, neighbors, friends, community organizations, environment, media, art, literature, nature, and so on.

In satisfying all the above vital needs, it is important to educate a person through the sphere of interaction and protect him from the environment that negatively affects his formation as a person, while ensuring the unity of education. The main goal of education is the development and implementation of effective organizational and pedagogical forms and means of spiritual and moral education of the younger generation, based on the rich national, spiritual and historical traditions and customs and universal values of the people.

The main task of education is the creation of broad opportunities for the mental, moral, free-thinking and physical development of the individual, as well as the comprehensive development of his abilities. So, the basis of education is:

- ✓ preparing young people for free thinking, helping them understand the meaning of life, develop the ability to manage and control themselves, purposefully approach their personal lives, instill a sense of unity of thought and action;
- ✓ to acquaint students with national and universal values, the rich spiritual heritage of our country, to form requirements for obtaining cultural and secular knowledge, to form skills and aesthetic ideas;
- ✓ identify and develop the knowledge and creativity of each student. To promote the activities of students, develop children's creativity, create conditions for further support;
- ✓ in the formation of norms of humane etiquette (mutual understanding, kindness, compassion), as well as in the means of education such as etiquette (injustice, lies, slander, intolerance to slander);
- ✓ to teach patriotism, secular thinking, interaction with people living in our society, to be always ready to protect your people and state;
- ✓ fostering respect for morality and the rules of the legal community, developing a sense of civic and social responsibility that determines the unique aspects of the individual, devotion to the development of the country in which he lives, sustainable spiritual development, environmental education;
- ✓ the formation of the qualities of a creative approach to work, which is the highest value in life;
- ✓ education and development of the desire for a healthy lifestyle, the formation of the desire to have a decent family;
- ✓ to teach our youth to think freely and independently.

The basic education system includes:

- ✓ recognition of the pupil as a high social value, respect for the uniqueness and originality of each child, adolescent and youth, taking into account his social rights and freedoms;
- ✓ instilling a sense of ownership among young people;
- ✓ rely on specific national traditions and instruments;
- ✓ Humanism in interpersonal relations, mutual respect of teachers and students, attention to the opinions of children, goodwill towards them. In practice, special

attention should be paid to the inclusion of children of different ages in the integral and continuous work of the educational process.

Teenagers and girls are not only preparing for the big life ahead, but also living this real life.

In extracurricular and out-of-school educational activities, it supplements the educational process in free time, based on the interests, desires, wishes, needs of students. It gives students the opportunity to develop their creativity and initiative.

The uniqueness of extracurricular activities lies in the fact that the variety of programs in circles and creative centers, innovations in their content create new opportunities for the formation of adolescents as individuals.
